Reinforced 3-Layer Aluminized Apron Against Radiant Heat and Molten Metal Splashes

The FYRAL® 310V Radiant Heat and Molten Metal Splash Protective Insulated Aluminized Apron is specially designed for professionals working in foundries and metalworking industries. With internal insulating layer structure with aluminized viscose fabric on the outside, it provides superior protection against high heat, flames, molten metal splashes, and intense radiant heat.

Radiant Heat and Molten Metal Splash Protection: Offers enhanced safety with its 3-layer structure, providing protection against high heat, flames, molten metal splashes, and radiant heat.

Ergonomic Design

Conforms to EN ISO 13688 standards, offering a user-friendly, comfortable, and secure design for ease of movement.

High Protection

Provides extra protection with its 3-layer structure; aluminumized viscose outer fabric, aramid felt heat barrier, and aramid-viscose inner lining offer excellent protection.

Comfortable to Use

Designed as a 3-layer apron, it provides maximum protection with lightweight, durable fabrics and ensures high comfort during long-term use with its easy-to-wear design.

Outer layer: Aluminumized Viscose FR
Heat barrier: %100 Aramid felt
Inner liner: %50 Nomex® %50 Viscose FR
Layer system: 3-Layered
