Flow Switch

EXPROOF

The flow switch is a device used to detect flow within pipes. When the flow stops or starts, the open or closed contacts provided by the flow switch are utilized to protect electrical equipment. This device plays a critical role in enhancing system safety and preventing equipment overload. Two options are available based on the application area:

- **Exproof**: Explosion-proof models ensure safe operation in areas with hazardous gases.
- **Non-Exproof**: Non-explosion-proof models are suitable for environments with standard safety requirements.

NON-EXPROOF
