

3M™ Scott™ 6,8l 300 Bar Compressed Air Cylinders

CE marked. Manufactured in accordance with Pressure Equipment Directive (PED) .

TECHNICAL INFORMATION

Compressed oxygen cylinders are composed of flow adjusting oxygen regulators and a full-face mask that

has a flexible hose at the end.

The regulator can be adjusted automatically according to the worker's lung structure and the required amount of oxygen.

As exhaling, prevents waste of oxygen in cylinder by quickly cutting off the oxygen flow. Hence it enables the longer-lasting use of oxygen cylinder.

Oxygen cylinder is carried on the back by shoulder and waist belts.

From the manometer on the chest strap, that is connected to the regulator the amount of pressure in the cylinder can be monitored continuously.

These devices are used for a period of ½ hours in areas with no oxygen and where harmful, toxic gases and vapors exist.

Compressed air cylinders are supplied to the market in steel and composite options. Composite cylinders are 50% lighter than steel cylinders.

CE marked.

Manufactured in accordance with Pressure Equipment Directive (PED).
