

Wolf® WF-300XL / WF-250XL Accessories

The WF-300XL and WF-250XL come with a variety of positioning, mounting, and protection accessories. These include fixing kits, Wolf's special anti-static protection kits certified for hazardous areas, and cable management fixtures.

TECHNICAL INFORMATION

Wolf's fixing kits provide flexible and durable mounting and positioning options for temporary applications. They allow the floodlight to be placed exactly where it's needed to illuminate the work area and help with the task at hand.

Fixing Kits:

- **WF-545: Magnet Kit** - This kit includes a stainless steel grille and 4 magnetic pads that securely attach to flat ferrous metal surfaces.
- **WF-699: Scaffold Kit** - This kit allows the Floodlite to be safely and securely attached to standard scaffold poles.

Tripods:

Wolf's tripods provide a stable platform for standalone floodlite positioning, allowing the light to be used at various heights and angles. They are lightweight, easy to transport, and ideal for maximizing illuminated work areas. Tripods are especially useful for larger areas and trench work, where height helps to increase the illuminated area.

Two models available:

- **LL-699:** Medium Duty – Steel (Plated) – max. height 2.4m
- **LL-668:** Heavy Duty – Steel (Plated) – max. height 3.2m

An optional **LL-669 Z bracket** is available for easy attachment of the WF-300XL to the lamp/tripod, making removal for ground-level positioning easier.

Various accessories are available to protect the WF-300XL from damage caused by shot blasting, dirt, paint, and other contaminants, extending the product's life and reducing costs.

Protection Kits:

- **WF-480:** Stainless Steel Mesh Cover – Ideal for harsher environments, this cover protects the lamp from rough use and is easily mounted and removed with provided fixings.
- **WF-421/3:** Anti-Static Lens Guard (Hazardous Area Certified) – Protects the toughened glass lens while maintaining excellent light output. It is securely attached to the front of the floodlite with screws.
- **WF-462:** Anti-Static Protection Cover Kit (Hazardous Area Certified) – Protects the light from dirt, paint, and other contaminants. It covers the entire product, sealing around the power cable with cable ties to minimize damage and extend its life.
- **WF-478:** Protective Stainless Steel Grille Kit – Comes with fixings to provide additional protection.

Cable Management:

- **LX-692: Magnet Cable Tidy** – Helps keep the working area free from trip hazards by elevating the cable off the ground along a ferrous metal surface using magnetic support.

PRODUCT REFERENCE	PRODUCTION DESCRIPTION	NOTES
FIXING KITS		
WF-545	Magnet Mounting Kit	1 x Stainless Steel frame, 4 x magnets and fixings

WF-699	Scaffold Fixing Kit	Scaffold mounting bracket for use on standard scaffold poles
PROTECTION		
WF-480	Stainless Steel Grille	1 Stainless Steel grille kit with fixings
WF-421/3	Lens Guard Kit	Lens Guard Kit, consisting of 3 x Anti-Static coated Polycarbonate screens and 4 x thumb screws
WF-462	Floodlite Protection Cover Kit	5 x 600mm x 1100mm 500 gauge Anti-Static Polythene covers and 5 x tie wraps
Cable Management		
LX-692	Magnet Cable Tidy	1 per pack
TRIPODS		
LL-699	Medium Duty	Steel - plated, maximum height 2.4m
LL-668	Heavy Duty	Steel - plated, maximum height 3.2m
