

ISTEC®

SHOWERS & EYEBATHS

Our new ISTEC® Type BIO Human Disinfection / Sanitizing Decontamination Misting Shower which has been launched by IST Safety Ltd to support your COVID-19 precautions in May, 2020 provides an effective sanitation during removal of the PPEs in workplaces and helps to reduce bacterial and viral infection risks of human by installing in public areas such as entrance of malls, buildings, hospitals etc.

The system operates automatically by its sensors without having touched when the user enters inside the tunnel.

Decontamination continues for 10 seconds. After a 10-second operating time, the spray nozzles stop spraying and the user leaves the tunnel.

With its standard 100L, 316SS tank which filled with water and %1 disinfectant solution, the unit provides 250 minutes decontamination in total that means 1500 users to be sanitize, based on 10 seconds per person.

The unit's main advantage is less water consumption during decontamination thanks to its special nozzles which mists the water.

Another advantage of the unit is that its modular structure that can be customized on design with its wide range of standard and optional accessories. We offer high quality portable or fixed type systems.

All our products are guaranteed against production and workmanship defects for a period of 24 months.

Frame Material		Aluminium Sigma Profile	Steel Profile

TECHNICAL DRAWING

ISTEC®

SHOWERS & EYEBATHS

We provide variety of special services you may need.

Engineering Consultation

IST provides complete information on the design, use, supply and care of emergency showers and eye/face washes & decontamination units & disinfection tunnels.

For all your needs during a new plant installation or facility renovation, our experienced team will guide you to the best and most economical solution.

Quality and Safe Product Selection

Our product range has a wide range of standard and optional designs. For interior and exterior applications, we offer high quality systems with heating or cooling, with freeze protection, portable or fixed special systems.

Special Engineering Solutions

Each unit is designed for different purposes and cannot substitute each other. In addition, standardized units with heating or cooling, may not always be the right choice for your needs. IST is fully equipped to offer and produce the special designed systems according to your needs.

Adjusting Water Temperature

Tepid water supply (16 - 38 ° C), which is a requirement of both American and European standards, requires special attention. Our expert team has the capability to analyze resources of your facility and offer solutions to ensure that emergency showers and eye / face wash fountains will work properly under all circumstances.

Our experts will work in coordination with your design or expert team.

Pre-Sales Solid Modelling and Technical Drawing

We provide customized design and engineering solutions to customers with our advanced three-dimensional solid modelling software. In this way, our customers can more easily analyze the suitability of the product to their facility and can plan the project accordingly.

Two or three dimensional detailed technical drawings are available for all our products.

After-Sales Support

Our expert technicians can evaluate your existing systems to ensure compliance with ANSI and EN Standards.

Our expert team will assist you about training and product setup for your new unit. All our products are guaranteed against production and workmanship defects for a period of 24 months.
